

Introduction to Generative AI with AWS

Project Documentation Report

Visit [UDACITY Introduction to Generative AI with AWS Project Documentation Report](#) to make a copy of this document.

Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	IT
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	Traditional approaches to data management such as > relational databases have proven to be inadequate for the task. The problem is that relational databases have been designed for transactions and not for analytics. The relational database is designed to provide a consistent view of the data at any given time. It is not designed to provide a consistent view of the data
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	Traditional approaches to data management such as > relational databases, data warehouses, and data lakes are inadequate for the challenges of modern data management. Data lakes are a type of data management system that stores large amounts of data in a single repository. Data lakes are designed to be scalable, flexible, and cost
